GABase from Pseudomonas fluorescens

Cat. No. GABase-001

Lot. No. (See product label)

Introduction

Description	GABase is a commercially available mixture composed of γ-aminobutyric acid aminotransferase (GABGT) and succinic semialdehyde dehydrogenase (SSDH) obtained from Pseudomonas fluorescens.

Product Information

Source	Pseudomonas fluorescens
Form	Lyophilized powder
Activity	2U/mg protein

Storage and Shipping Information

Storage	Store at -20 ℃ for at least 3 years.
