Creative Enzymes®

Firming Peptide Complex

Cat. No. CECP-008

Lot. No. (See product label)

Introduction

Description	CECP-008 is able to act on the whole dermal layer of the skin to eliminate wrinkles. It acts on proteoglycans and glycosaminoglycans, promotes the growth of keratinocytes, enhances the cohesion between epidermal cells, and effectively repairs the stratum corneum of the skin. It promotes the healthy production of collagen and solves the sagging problem of aging skin.
Applications	It can effectively up-regulate the gene expression of Syndecan-1, and has certain anti-aging and repairing effects. It can effectively up-regulate the gene expression of COL17A1, and has certain skin tightening effect. It can be used in facial anti-aging and anti-wrinkle products to improve skin elasticity, especially suitable for adding to freeze-dried products.

Product Information

Appearance	White powder
Form	Powder
pH Stability	3.5-7.0

Usage and Packaging

Package	1 kg per bag

Storage and Shipping Information

Storage	Keep sealed, shaded and cool.
