Anti-Wrinkle Complex Peptide

Cat. No. CECP-009

Lot. No. (See product label)

Introduction

Description	Anti-wrinkle complex peptide contains active ingredients that promote collagen, anti-expression lines, anti-glycation and other effects to fight against various signs of ageing. Palmitoyl Tripeptide-1: promotes collagen synthesis in the dermis. Palmitoyl Pentapeptide-4: stimulates collagen and elastin synthesis in the dermis. Acetyl Hexapeptide-8: blocks neurotransmitter release and reduces muscle contraction. Myostatin: antioxidant and anti-glycosylation. The mechanism of action of the four active ingredients is clear. The two signaling peptides increase collagen in the skin, and the neurotransmitter-inhibiting peptide reduces the prevention of wrinkles. Myostatin solves the aging wrinkles produced by skin glycosylation from the source, and hits various skin wrinkles phenomena, effectively removes wrinkles.
Applications	Comprehensively solve the skin wrinkles, wrinkle and anti-aging. Used in anti-wrinkle creams, essences and other care products.

Product Information

Appearance	Clarified clear liquid
Form	Liquid
pH Stability	3.0-5.0

Usage and Packaging

Package	1kg/bottle

Storage and Shipping Information

Storage	Keep sealed, shaded and cool.
