

Acetyl heptapeptide-4 (Microsensitive Peptide)

Cat. No. CECP-028

Lot. No. (See product label)

Introduction

Description Microsensitive Peptide is a heptapeptide that strengthens fragile skin in urban areas by promoting the balance and diversity of the microbial community and increasing beneficial bacteria. It can increase the beneficial bacteria in the skin, improve the immune response of the skin and enhance the integrity of the physical barriers, thus strengthening the barrier protection of the skin and improving the skin's own defense system.

Applications Acetyl heptapeptide-4 can effectively reduce the gene expression of IL-1 α , TNF- α , IL-8, and has a certain soothing effect. It can be used in facial repair and anti-aging products to stabilize the skin barrier.

Product Information

Appearance Clarified clear liquid

Form Liquid

pH Stability 4.0-6.0

Usage and Packaging

Package 1kg/bottle

Storage and Shipping Information

Storage Keep sealed, shaded and cool.
