Creative Enzymes®

Acetyltetrapeptide-5

Cat. No. CECP-034

Lot. No. (See product label)

Introduction

Description	1. ACE enzyme inhibitor: Improves microcirculation of eye skin by inhibiting angiotensin|converting enzyme. 2. Glycosylation Inhibitor: Increases the activity of SOD, inhibits its glycosylation, prevents cross-linking of proteins, and improves the elasticity of the skin. In the skin, collagen and and elastin are glycosylated, which will lead to a decrease in the strength of the skin, thus increasing the number of wrinkles and fine lines. Since skin collagen is particularly susceptible to glycosylation, preventing glycosylation is important for maintaining healthy and youthful looking skin. 3. Reduces capillary permeability:Inhibits capillary permeability around the eye area, reducing the penetration of fluid from blood vessels into the tissues around the eye.
Applications	Used in eye creams and eye care products.

Product Information

Appearance	Clarified clear liquid
Form	Liquid
CAS No.	820959-17-9
pH Stability	3.0-5.0

Usage and Packaging

Package	1kg/bottle

Storage and Shipping Information

Storage	Keep sealed, shaded and cool.
