

Postbiotics for human brain and gut health

Cat. No. PSBT-001

Lot. No. (See product label)

Introduction

Description

Postbiotic for Human Brain and Gut Health is a new generation of postbiotic intestinal flora conditioning and probiotic solutions, selected from naturally fermented milk and healthy breast milk probiotic strains. With unique technologies of metabolic regulation, metabolism and growth interactions, and functional ingredient embedding, we developed a functional postbiotic product that is more resistant to industrial heat processing and human gastric acid than normal probiotics. Postbiotic can significantly improve the symptoms of IBD inflammatory bowel disease by decreasing pro-inflammatory cytokines, increasing anti-inflammatory cytokines, vitamin E and fatty acid anabolic pathways. It can increase the content of beneficial bacteria, increase the competitive advantage of beneficial intestinal bacteria, regulate the metabolism of bile acids, and increase the acylcarnitine in the blood, which can promote the frequency of defecation, significantly improve the symptoms of constipation, and improve the quality of life of people.

Applications

Add to solid and liquid beverages, functional foods, milk and dairy products, pastries, baked goods, canned confectionery, flavorings, etc.

Product Information

Form

Powder or Liquid

Specific Activity

200 billion CFU/g or 30 billion CFU/mL

Storage and Shipping Information

Storage

Sealed, dark, dry, at cool place
