Creative Enzymes®

Nocardia and streptococcus lysate

Cat. No. PSBT-005

Lot. No. (See product label)

Introduction

Description	Infections caused by Nocardia species in California sea bass often result in emaciation, ulcers, red spots on the body, inflamed and congested gill filaments, and in some cases, necrotic gills. Necropsy reveals numerous tumor-like nodules in the liver, white nodules on the spleen, kidneys, peritoneum, and dorsal spine, with a significant increase in mortality. BPEL-006 is a specialized product designed to combat antibiotic-resistant and pathogenic Gram-positive bacteria, with a particular focus on Nocardia and Streptococcus. Product Functions: Targeted Lysate: Effectively lyses Gram-positive bacteria, specifically Nocardia and Streptococcus. Probiotic Supplementation: Provides high-quality probiotics to enhance gut nutrient absorption and promote fish growth. Immune System Activation: Stimulates the immune system, supports the development of immune organs, and boosts immune function.
Applications	Farming of sea bass, tilapia, catfish and yellow catfish

Product Information

Appearance	Powder

Storage and Shipping Information

Storage	Store in a cool, dry place. Shelf life: 12 months.
