

Vibrio Control Compound Agent

Cat. No. BPEL-005

Lot. No. (See product label)

Introduction

Description Vibrio species, including *Vibrio parahaemolyticus*, *Vibrio alginolyticus*, and *Vibrio harveyi*, are significant causes of infections in shrimp. Comprehensive control measures are beneficial for improving water quality, enhancing Vibrio control, and preventing sudden outbreaks caused by these bacteria. Features: Efficiently Eliminates pathogenic Vibrio species and bacterial flocs in shrimp and water. Reduces the pathogenicity of Vibrio virulence factors. Supplemental Bacteria Placement: Balances aquatic microbiota, promotes shrimp digestion and absorption. Enhances Feed Conversion: Improves feed absorption rate and conversion efficiency, reduces feed ratio. Boosts Growth and Survival Rates: Increases growth rate and survival rate of juvenile and adult shrimp. Key Ingredients: Compound bacteriophages *Bacillus subtilis* *Bacillus licheniformis*

Applications Pacific white shrimp (*Litopenaeus vannamei*), black tiger shrimp (*Penaeus monodon*), giant freshwater prawn (*Macrobrachium rosenbergii*).

Product Information

Appearance Powder or liquid

Storage and Shipping Information

Storage Powder Form: Store in a cool, dry place. Shelf life: 12 months. Liquid Form: Store at 2-8°C. Shelf life: 12 months.
