

Aquaculture intestinal and liver protective agent

Cat. No. BPEL-007

Lot. No. (See product label)

Introduction

Description BPEL-007 is composed of patented bacteriophage + high-quality Clostridium butyricum, which can regulate the structure of intestinal flora. After killing harmful bacteria, it allows beneficial bacteria to occupy the position in time, increases the occupancy rate of beneficial bacteria, promotes the proliferation of immune cells, enhances the immunity of shrimp, and improves the physical fitness of shrimp. Product functions: 1. Regulate the balance of microecology, improve the intestinal microenvironment, and enhance immune function. 2. Rich in multiple amino acids, B vitamins and vitamin K, supplement nutrients and promote absorption. 3. It can produce amylase, pectinase, glucanase, etc., and can degrade feed to improve feed nutrition and palatability. Main ingredients: Bacteriophage, Clostridium butyricum

Applications Aquaculture of aquatic animals

Product Information

Appearance Powder

Storage and Shipping Information

Storage Store in a cool, dry place. Shelf life: 12 months.
