Creative Enzymes®

Phage Mate

Cat. No. BPEL-009

Lot. No. (See product label)

Introduction

Description	Natural phage lytic enzymes have high host specificity and strong lytic activity, which can destroy the bacterial bio-membrane, and have the advantages of being green and safe, and not easy to produce drug resistance. Phage Mate is a specialized product for Gram-positive and Gram-negative bacteria encountered in marine and freshwater aquaculture, especially for Vibrio, Aeromonas, Edwardsiella, Streptococcus and Nocardia, etc. It can be used for the treatment of Vibrio, Aeromonas, Edwardsiella, Streptococcus and Nocardia. Product functions: 1. Highly efficient and broad-spectrum inhibition of bacterial growth in the water body, control the number of bacteria in the water body. 2.Efficiently improve the ecological environment of the water body, effective ecological occupation. 3. Synergize with phage, increase the effect of phage, broad spectrum of antibacterial, non-resistant. 4. Reduce the viscosity of intestinal contents, which is favorable to the digestion and absorption of nutrients. 5. Improve feed utilization and animal performance. 6. Improve the microbiota of digestive tract and intestinal environment. Main ingredients: phage lyase + bacterial fermentation extracts
Applications	Various kinds of marine and freshwater aquaculture species.

Product Information

Appearance	Liquid

Storage and Shipping Information

Storage	Store in a cool, dry place. Shelf life: 12 months.
