

Matrix Metalloproteinase-2 from Human, Recombinant

Cat. No. NATE-0860

Lot. No. (See product label)

Introduction

Description Matrix metalloproteinases are members of a unique family of proteolytic enzymes that have a zinc ion at their active sites and can degrade collagens, elastin and other components of the extracellular matrix (ECM). These enzymes are present in normal healthy individuals and have been shown to have an important role in processes such as wound healing, pregnancy, and bone resorption. However, overexpression and activation of MMPs have been linked with a range of pathological processes and disease states involved in the breakdown and remodeling of the ECM. Such diseases include tumor invasion and metastasis, rheumatoid arthritis, periodontal disease and vascular processes such as angiogenesis, intimal hyperplasia, atherosclerosis and aneurysms. Recently, MMPs have been linked to neurodegenerative diseases such as Alzheimer's, and amyotrophic lateral sclerosis (ALS). Natural inhibitors of MMPs, tissue inhibitor of matrix metalloproteinases (TIMPs) exist and synthetic inhibitors have been developed which offer hope of new treatment options for these diseases.

Synonyms 72 kDa Gelatinase; Matrix Metalloproteinase 2; Gelatinase A; EC 3.4.24.24; type IV collagenase; 3/4 collagenase; matrix metalloproteinase 5; 72 kDa gelatinase type A; collagenase IV; collagenase type IV; MMP 2; type IV collagen metalloproteinase; type IV collagenase/gelatinase

Product Information

Species	Human
Source	CHO Cells
Form	Liquid
EC Number	EC 3.4.24.24
CAS No.	146480-35-5
Molecular Weight	72 kDa
Purity	>90% by SDS-PAGE
Buffer	In 150 mM NaCl, 20 mM Tris-HCl, 5 mM CaCl ₂ , 0.05% BRIJ-35 Detergent, pH 7.4.

Storage and Shipping Information

Storage < -70°C; Avoid freeze/thaw
