

Mixed Feed Additive Probiotics

Cat. No. BPEL-014

Lot. No. (See product label)

Introduction

Description Mixed Feed Additive Probiotics is customized for different animals (poultry, swine, ruminants, furbearers, aquatic animals, etc.) and consists of Salmonella phage, E. coli phage and Clostridium perfringens phage, which are capable of lysing more than 95% of Salmonella, more than 80% of E. coli, and more than 90% of Clostridium perfringens.

Product Information

Appearance White powder

Function 1. Bacteriophages kill intestinal pathogenic bacteria, mediate the balance of intestinal flora and improve intestinal health. 2. Promote the health of the intestines (the largest immune organ of livestock and poultry), thereby enhancing the body's immunity and anti-stress ability. 3. Reduce the number of harmful bacteria, reduce the energy consumption of the body, strengthen the absorption of nutrients, promote animal growth, and reduce the ratio of feed to meat. 4. The compound formula promotes animal growth and effectively prevents and treats bacterial diseases caused by Salmonella, Escherichia coli and Clostridium welchii.

Storage and Shipping Information

Storage Please store in a ventilated, normal temperature, dry clean place to avoid pollution. Sealed package, can be stored over 12 months in a ventilated, cool and dry place.
