

Bacteriocin TS

Cat. No. BPEL-015

Lot. No. (See product label)

Introduction

Description

Bacteriocin TS is a natural bioactive antimicrobial peptide derived from the fermentation of *Lactococcus lactis* isolated from traditional dairy products, and its main active ingredient is bacteriocin. Bacteriocin TS is a natural bioactive antimicrobial peptide composed of 34 amino acids, with a molecular weight of 3350D and an active ingredient content of >2000IU/g. The bactericidal mechanism is mainly regarded as “membrane channel mechanism”, the positively charged bacteriocin and the negatively charged phospholipids on the bacterial cell membrane are combined by electrostatic interaction, and multiple active molecules are combined on the cell membrane, which can form transmembrane pores with a diameter of 2.0~2.5nm, destroying the integrity of the cell, thus achieving the bactericidal effect. It is characterized by good water solubility, good thermal stability, wide antibacterial spectrum, safety and non-toxicity. It can inhibit most gram-positive and negative bacteria. No liver or kidney toxicity, eventually hydrolyzed into active peptide in the animal body, absorbed and utilized, no drug residue. Physical sterilization, not easy to produce drug resistance; especially resistant to high temperature, acid and alkali, not affected by the processing technology.

Product Information

Appearance

White powder

Function

Improve the intestinal health level of animals to regulate the microflora balance. Enhance animal immunity and resistance to stress. Enhance animal performance and improve feed remuneration. Reduce the incidence of animal bacterial diseases to reduce the rate of diarrhea, mortality.

Storage and Shipping Information

Storage

Please store in a ventilated, normal temperature, dry clean place to avoid pollution. Sealed package, can be stored over 12 months in a ventilated, cool and dry place.
