

## Native Bovine Lysogangliosides

Cat. No. NATE-0870

Lot. No. (See product label)

### Introduction

#### Description

Lyso-gangliosides are prepared by removing glycolipid enzymatically from natural gangliosides. They can be used to analyze various cell function, such as cell proliferation, differentiation, apoptosis, signal transduction, etc. It can also be used as a material of ganglioside derivatives in RI labeling, fluorescence labeling, immobilization since they have free amino group in sphingosine.

#### Synonyms

Lyso-gangliosides; Lyso-GM3; Lysogangliosides

### Product Information

#### Species

Bovine

#### Source

Bovine milk ganglioside GM3

#### Form

Lyophilized

#### Purity

Greater than 95% by TLC

### Storage and Shipping Information

#### Storage

-20°C
