Creative Enzymes®

Bovine Collagen Peptides

Cat. No. EXTZ-559

Lot. No. (See product label)

Introduction

Description	Bovine collagen peptides are small molecular peptides extracted from bovine collagen through enzymatic hydrolysis, which have high bioavailability and good absorbability. These peptides possess a variety of physiological activities, including promoting skin health, enhancing joint function, and improving bone strength. Due to their small molecular size, bovine collagen peptides can be more easily absorbed by the human body and are widely used in health foods and nutritional supplements, such as collagen oral liquids, protein powders, and beauty products.
