

Molybdenum Gly Chelate

Cat. No. CEFX-208

Lot. No. (See product label)

Introduction

Description

Molybdenum Glycinate Chelate is a highly bioavailable form of molybdenum, a trace mineral essential for various enzymatic processes in the body. In this chelated form, molybdenum is bound to the amino acid glycine, improving its absorption and stability in the digestive tract. Molybdenum plays a critical role in supporting enzyme function, particularly in processes related to detoxification, metabolism of sulfur-containing amino acids, and breakdown of certain toxins. This form is often preferred in dietary supplements for its efficient uptake and reduced likelihood of gastrointestinal side effects.

Applications

Molybdenum Glycinate Chelate offers an efficient and bioavailable form of molybdenum, making it an essential component in supplements focused on detoxification, cellular health, and metabolic support.

Product Information

Appearance

White crystalline powder

Purity

0.2% Molybdenum

Usage and Packaging

Package

25KG/Drum with double plastic bag of foodstuff inside

Storage and Shipping Information

Storage

2 years under well storage situation and stored away from direct sun light
