

Anserine

Cat. No. EXTZ-598

Lot. No. (See product label)

Introduction

Description Anserine is a highly stable water-soluble dipeptide that exists naturally in animals. This product is extracted from the muscles of large migratory fish, such as salmon, tuna and bonito, and is a marine fish oligopeptide. Anserine can inhibit the accumulation of fatigue substance lactic acid, and can also relieve hyperuricemia by promoting uric acid excretion.
