

Urolithin A Powder

Cat. No. CEFX-414

Lot. No. (See product label)

Introduction

Description

Urolithin is divided into two types: Urolithin A . Urolithin A is generated by the gut microbiota and is a natural metabolite of a class of compounds called Ellagitannins found in pomegranate and other fruits and nuts.

Applications

Urethane A is an excellent and effective nitrogen fertiliser, which contains a high concentration of nitrogen that can be fully absorbed and utilised by plants. Compared with traditional nitrogen fertilisers, it has a longer nutrient release time and higher persistence of fertiliser effect, which can provide sufficient nutrients to plants, improve soil quality and promote plant growth during the plant growth cycle. As antibiotic It is a broad-spectrum antimicrobial agent with a good bactericidal effect on many kinds of bacteria. It can be used as an effective drug for the diagnosis and treatment of a variety of diseases, such as urinary tract infections, gastrointestinal tract infections, skin infections and so on. Other applications It can also be used in water treatment, yeast fermentation, antiseptic and other fields.

Synonyms

3,8-dihydroxy-urolithin

Product Information

Appearance

White to Beige Fine Powder

CAS No.

1143-70-0

Purity

0.98

Usage and Packaging

Package

25kg/bag, or according to customers' requirements

Storage and Shipping Information

Storage

In a cool, dry place away from direct sunlight
