

## Brevibacillus laterosporus (feed grade)

Cat. No. PRBF-020

Lot. No. (See product label)

### Introduction

**Description** Brevibacillus laterosporus can secrete a large number of active substances that promote the growth of crop roots, enable crops to take root quickly and produce a variety of antibiotics, inhibit the reproduction of harmful bacteria, and degrade heavy metals in the soil.

**Applications** It is widely used in biofertilizers.

### Product Information

**Appearance** Off-white powder

**Function** 1. Inhibit pathogens: secrete a large amount of chitinase, which can prevent the invasion of harmful bacteria and prevent the occurrence of diseases. 2. Promote growth: secrete extracellular enzymes, stimulate root development, promote nutrient absorption, promote leaf growth, enhance photosynthesis, improve crop quality, and increase economic benefits. 3. Improve soil: promote nitrogen conversion, improve soil quality, promote aggregate formation, increase soil organic matter, and improve soil permeability. 4. Decompose fertilizer residues: remove accumulated fertilizer residues in the soil, improve fertilizer utilization, reduce nitrate content, solidify some heavy metals, and reduce the content of heavy metals in plants.

### Usage and Packaging

**Package** 25kg/bag, Ton bag

### Storage and Shipping Information

**Storage** Store in a ventilated, cool, dry place for up to 12 months.
