

Postbiotics for oral care

Cat. No. PSBT-009

Lot. No. (See product label)

Introduction

Description The mouth is an important battleground for humans against bacteria. Oral malodor and dental caries are essentially caused by the imbalance of oral microbiota and the uncontrolled growth of harmful bacteria. Therefore, adjusting the ecological balance of oral microbiota is the first step in oral care. Our oral postbiotics have a significant inhibitory effect on four oral pathogens: Streptococcus mutans, Porphyromonas gingivalis, Fusobacterium nucleatum, and Actinomyces israelii, making them the preferred choice for oral antibacterial solutions.

Applications Oral care
