

Bacillus megaterium

Cat. No. PRBT-128

Lot. No. (See product label)

Introduction

Description

Bacillus megaterium is an aerobic, spore-forming, Gram-positive bacterium with a diameter greater than 1.0 µm. It has the characteristics of fast reproduction, strong vitality, and safety. It is a beneficial soil bacterium that is not only environmentally friendly, safe for food crops, but also harmless to humans and animals. Bacillus megaterium can decompose organic phosphorus compounds such as lecithin or nucleic acids, and can degrade organic phosphorus in the soil very well. It is one of the commonly used biological strains for producing biological organic fertilizers.

Product Information

Form

Powder

Activity

10 billion CFU/g or more
