

Active Vitamin C Liposome

Cat. No. EXTZ-603

Lot. No. (See product label)

Introduction

Description

Vitamin C is an important antioxidant that participates in a variety of reactions in the body and has the functions of promoting collagen production and scavenging free radicals. Vitamin C is a water-soluble vitamin that cannot be dissolved in fat-soluble systems and is extremely unstable in aqueous solutions, so its use is greatly restricted. Active Vitamin C Liposome is a vitamin C nano-active substance with an average particle size of less than 30 nanometers developed using a nano-transmission system. It solves the solubility and stability problems of vitamin C, greatly increases the absorption rate and bioavailability, and greatly expands its application range.
