Creative Enzymes®

Active Glutathione Liposome

Cat. No. EXTZ-604

Lot. No. (See product label)

Introduction

Description	Glutathione is a small molecule tripeptide composed of glutamic acid, cysteine, and glycine, and is one of the most important antioxidants in living organisms, participating in various biological processes. Due to its antioxidant properties, glutathione is added to many skincare products to help slow down skin aging, increase skin elasticity, and has effects on reducing pigmentation and whitening the skin. Active Glutathione Liposome applies nanoliposome encapsulation technology to formulate glutathione into nanoliposomes, effectively enhancing the stability of glutathione and masking its unique odor.
