Active Retinol Liposome

Cat. No. EXTZ-606

Lot. No. (See product label)

Introduction

Description

Retinol, also known as Vitamin A, is a fat-soluble vitamin that plays multiple essential roles in the human body. It is crucial for maintaining normal vision, particularly night vision, as it aids in the synthesis of rhodopsin in the retina, a key pigment for light sensitivity under low-light conditions. Retinol plays an important role in skin health as it assists in skin cell renewal, reducing wrinkles and fine lines, and promoting smoother skin. In cosmetics, retinol is commonly used as an anti-aging ingredient. Active Retinol Liposome is a nano-active substance developed using a nano delivery system, characterized by good stability, high safety, good solubility, and high bioavailability.
