Creative Enzymes®

Active Soy isoflavone Liposome

Cat. No. EXTZ-615

Lot. No. (See product label)

Introduction

Description	Isoflavones are a type of flavonoid compound primarily found in leguminous plants and are secondary metabolites formed during the growth of soybeans. Soy isoflavones have been proven to effectively combat aging, with hormone-like effects and no side effects. The Active Soy Isoflavone Liposome encapsulates soy isoflavones within a nanoscale carrier composed of a polar lipid layer and a lipophilic core, transforming it into a completely water-soluble form.
