

Native Human Lysogangliosides

Cat. No. NATE-0888

Lot. No. (See product label)

Introduction

Description Lyso-gangliosides are prepared by removing glycolipid enzymatically from natural gangliosides. They can be used to analyze various cell function, such as cell proliferation, differentiation, apoptosis, signal transduction, etc. It can also be used as a material of ganglioside derivatives in RI labeling, fluorescence labeling, immobilization since they have free amino group in sphingosine.

Synonyms Lysogangliosides; Lyso-GM2; Lyso-gangliosides

Product Information

Species Human

Source Human brain ganglioside GM2

Form Lyophilized

Purity Greater than 95% by TLC

Storage and Shipping Information

Storage -20°C
