

Native Human Lysogangliosides

Cat. No. NATE-0888

Lot. No. (See product label)

Introduction

Description

Lyso-gangliosides are prepared by removing glycolipid enzymatically from natural gangliosides. They can be used to analyze various cell function, such as cell proliferation, differentiation, apoptosis, signal transduction, etc. It can also be used as a material of ganglioside derivatives in RI labeling, fluorescence labeling, immobilization since they have free amino group in sphingosine.

Synonyms

Lyso-gangliosides; Lyso-GM2; Lyso-gangliosides

Product Information

Species

Human

Source

Human brain ganglioside GM2

Form

Lyophilized

Purity

Greater than 95% by TLC

Storage and Shipping Information

Storage

-20°C
