Creative Enzymes®

Active Ceramide Liposome

Cat. No. EXTZ-617

Lot. No. (See product label)

Introduction

Description	Ceramide is a major component of the skin's stratum corneum lipids and plays a role in skin protection, moisturization, and nourishment. Natural ceramides are difficult to extract and cannot be synthesized chemically. This product uses Ceramide-3, which has a structure identical to that of natural ceramides, as the raw material. By adopting a nano delivery system, nanoscale ceramide with a particle size of less than 30nm has been developed, effectively addressing issues related to the solubility and applicability of the raw material, allowing it to be stably encapsulated within nano carriers.

Product Information

Form	Powder or liquid
