Creative Enzymes®

Active Curcumin Liposome

Cat. No. EXTZ-618

Lot. No. (See product label)

Introduction

Description	Curcumin is a yellow pigment extracted from the rhizome of turmeric. Extensive research has shown that curcumin possesses various biological activities, such as antioxidant, anti-infective, anti-inflammatory, anticoagulant, anti-atherosclerotic, and tumor growth inhibition effects. By utilizing a nano delivery system, nano-active substances with a particle size of less than 30nm have been developed, allowing curcumin to be stably encapsulated within nano carriers. This significantly increases its absorption efficiency and bioavailability, effectively overcoming its original limitations while retaining its benefits, making its application more convenient and widespread.

Product Information

Form	Powder or liquid
