Creative Enzymes®

Enzyme blend for fish and shrimp

Cat. No. FEED-2332

Lot. No. (See product label)

Introduction

Description	Aquatic animals, especially omnivorous and herbivorous fish, have short digestive tracts, insufficient secretion of proteases and amylases, and their special living environment leads to low enzyme activity. The protein content of fish and other aquatic animals is high. Under the constraints of cost, animal protein such as soybean meal and miscellaneous meal accounts for a large proportion, resulting in high xylan and cellulose content. This product contains highly active xylanase, cellulase and neutral protease, which can specifically degrade anti-nutritional components in feed, improve the digestion, absorption and utilization rate of nutrients, and reduce the occurrence of diseases.
Applications	1. This product is suitable for use in the diet of marine and freshwater fish and shrimp. 2. This product needs to be pre-mixed before being added to a large amount of feed and mixed until uniform.

Product Information

Appearance	Powder

Usage and Packaging

Package	1 kg/bag for bagging, 25 kg/bag for bulk.

Storage and Shipping Information

Storage	Place in a ventilated, cool and dry place, avoid mixing with toxic and harmful substances.
