Creative Enzymes®

Liquid probiotics blend for cleansing

Cat. No. PRBT-133

Lot. No. (See product label)

Introduction

Description

Microorganisms are omnipresent in nature, forming a vast and complex ecosystem. Among them, probiotics have gradually attracted widespread attention as an important component. Probiotics play a significant role not only in human health but also in maintaining the balance and stability of environmental ecosystems. When we are at a loss facing stubborn stains, we can turn to probiotics for help. Probiotics can secrete a variety of enzymes, which allows them to flexibly break down different components. After we use probiotics for traditional cleaning, they do not disappear immediately. Instead, they remain in place, continuing to break down finer dirt and using it as nourishment to provide a lasting cleaning effect. So, you see, as you walk away, you leave behind an “army of probiotics.” They can not only achieve a lasting cleaning effect but also maintain environmental stability for a long time and inhibit the growth of harmful bacteria. Our cleaning liquid probiotic formula contains a variety of carefully selected strains and prebiotics. Special technology allows this product to remain stable at room temperature and can also be used in combination with other ingredients you desire.
