Creative Enzymes®

Chicken protein peptide

Cat. No. EXTZ-641

Lot. No. (See product label)

Introduction

Description	Chicken protein peptides are peptide substances produced by the enzymatic hydrolysis of chicken breast protein. They typically possess good solubility and stability in water. Chicken protein peptides exhibit a variety of biological activities, including antioxidant, anti-fatigue, and immune regulation properties. These characteristics make chicken protein peptides potentially valuable in the development of functional foods and nutritional supplements.
