Creative Enzymes®

D-Panthenol

Cat. No. EXTZ-659

Lot. No. (See product label)

Introduction

Description	D-Panthenol, also known as Provitamin B5, is a derivative of Vitamin B5. It serves as a penetrating humectant, capable of passing through the skin to retain moisture in hair and skin. With its small molecular weight, it can effectively penetrate the stratum corneum and rapidly convert into Vitamin B5, which is essential for the body's metabolism and an important precursor for the synthesis of coenzyme A. Panthenol has been widely used in the pharmaceutical, food, and cosmetic industries.
