

Trichoderma virens

Cat. No. PRBT-140

Lot. No. (See product label)

Introduction

Description Trichoderma virens is a haploid filamentous fungus belonging to the phylum Ascomycota. It can rapidly and extensively colonize plant roots, inhibiting the growth of pathogenic fungi through competitive mechanisms, thereby protecting crops from pathogen damage. Therefore, it is widely used in agriculture to control various plant pathogens, such as Rhizoctonia solani and Pythium ultimum.
