Lycopodium powder

Cat. No. EXTZ-680

Lot. No. (See product label)

Introduction

Description	Lycopodium powder is a fine powder made from the spores of Lycopodiaceae plants, with a light brownish-yellow color and good flowability. It is a versatile natural material, widely used in various industries such as cosmetic puff, baby talcum powder, magic shows, fireworks, foundry, and chemical industry, thanks to its unique physical and chemical properties. Lycopodium powder is divided into heavy and light varieties. The heavy variety is of slightly inferior quality and is suitable for applications like firework production or advertising props. The light variety is of better quality and can be used in pharmaceuticals and other fields with higher requirements.
