Phytosphingosine

Cat. No. EXTZ-662

Lot. No. (See product label)

Introduction

Description	Phytosphingosine is a naturally occurring sphingolipid compound, primarily found in plants, fungi, and animal cells, and it possesses a variety of biological activities. It has significant anti-inflammatory and antibacterial properties, capable of inhibiting the growth of various bacteria and fungi. Additionally, it can enhance the skin barrier function, moisturize, and improve the flexibility and luster of the skin. It is widely used in products such as moisturizing creams and anti-aging serums.
