Creative Enzymes®

Corn gluten meal

Cat. No. CEFX-328

Lot. No. (See product label)

Introduction

Description	Corn gluten meal is the protein fraction remaining after the extraction of starch from corn kernels. It typically contains 12% to 20% crude protein, with a balanced amino acid composition that includes all essential amino acids. Additionally, it contains small amounts of fat, fiber, and minerals. Corn gluten meal is a versatile feed ingredient and holds an important position in the global animal feed industry due to its high protein content and cost-effectiveness. Applications: 1. Animal Feed: Due to its high protein content, corn gluten meal is widely used as animal feed, particularly for poultry, pigs, and aquaculture. It serves as a cost-effective and easily digestible source of protein. 2. Pet Food: In pet food, it is also used as a protein supplement to enhance the nutritional value of the food. 3. Industrial Applications: In some cases, corn gluten meal is also used in industrial production, such as as a binder or filler.
