Creative Enzymes®

Plasmin for wound treatment

Cat. No. EXTZ-703

Lot. No. (See product label)

Introduction

Description	Plasmin plays multiple roles in the wound healing process. One of them is that it attacks and dissolves fibrin clots. In other words, plasmin clears the wound, removing dead skin and tissue. Another is that Plasmin promotes cell activation and the expression of pro-inflammatory mediators, which are crucial for wound healing.
