Krill Oil

Cat. No. EXTZ-713

Lot. No. (See product label)

Introduction

Description	Krill oil is extracted from Antarctic krill and contains effective components such as phospholipids, Omega-3 fatty acids (EPA, DHA), and natural astaxanthin. Among these, DHA, commonly known as "brain gold," is widely present in brain cells in the form of phospholipids and plays an important role in the normal functioning of the structure and function of the central nervous system. Research indicates that supplementing with an adequate amount of DHA can enhance intelligence and brain health. It has a significant role in the development of brain neurons and learning memory behaviors, and it also plays an important role in maintaining brain function and delaying brain aging.

Product Information

Source	Antarctic krill
Form	Liquid
Purity	Phospholipids 40%, EPA 10%, DHA 5%.
