

Lupin bean peptide

Cat. No. EXTZ-704

Lot. No. (See product label)

Introduction

Description

Lupin Bean Peptide is a functional, water-soluble ingredient produced by modern enzymatic hydrolysis of premium lupin beans. The starting material is naturally rich in high-quality plant protein with a balanced amino-acid profile, plus dietary fiber, unsaturated fatty acids, vitamin E and minerals (K, Mg, Fe), yet free from soy allergens and gluten. Compared with conventional lupin protein or whole beans, the low-molecular-weight peptides dissolve instantly without clumping, blend unobtrusively into beverages, porridges or baked goods, and are absorbed directly by the intestine—no further digestion required—delivering rapid nutrition even to people with compromised digestive function.

Product Information

Source	Lupin bean
Form	Powder
Purity	0.8
