Liposomal NMN

Cat. No. EXTZ-709

Lot. No. (See product label)

Introduction

Description	NMN, short for β-nicotinamide mononucleotide, is a naturally occurring bioactive nucleotide that serves as a key metabolic intermediate and the direct precursor for NAD^+ synthesis, supporting a wide range of physiological functions. Encapsulating NMN within liposomal lipid bilayers markedly elevates its bioavailability, delivering a more powerful and efficient NAD^+-boosting experience.
