

Bitter melon peptide

Cat. No. EXTZ-712

Lot. No. (See product label)

Introduction

Description

Bitter Melon Peptides are small-molecular protein fragments extracted from bitter melon. Their primary actions are to enhance metabolism, help modulate blood glucose, and supply antioxidant and anti-inflammatory benefits—properties that have attracted considerable interest. Thanks to their low molecular weight and high absorbability, these peptides are utilized by the body far more readily than intact bitter melon.
