Creative Enzymes®

EMIQ

Cat. No. EXTZ-722

Lot. No. (See product label)

Introduction

Description	Enzymatically Modified Isoquercitrin (EMIQ) is a water-soluble flavonoid glycoside obtained by enzymatic bioconversion. It is heat- and light-stable and highly soluble, making it suitable for foods, dietary supplements, and pharmaceuticals. EMIQ enhances the photostability of natural pigments, helping to preserve the color and flavor of beverages and other products. When incorporated into drugs or nutraceuticals, it markedly improves the solubility, dissolution rate, and bioavailability of poorly water-soluble actives.

Product Information

Form	Powder
Purity	15.00%
