

Porcine spleen powder

Cat. No. EXTZ-731

Lot. No. (See product label)

Introduction

Description

Porcine Spleen Powder is a powdery product made from porcine spleen tissue through processes such as cleaning, drying, and grinding. It contains high-quality animal protein, polypeptides, and a variety of essential amino acids, which serve as basic raw materials for the repair and metabolism of body tissues. Porcine Spleen Powder also contains B vitamins (such as vitamin B12), iron, zinc, and other micronutrients. Among these, iron plays a certain auxiliary role in improving iron-deficiency anemia. It is used as a raw material for dietary supplements or directly made into capsules and granules for daily nutritional supplementation. It is especially suitable for children with weak digestive functions, the elderly, or people in the post-operative recovery period.
