

Porcine Spleen Peptide Powder

Cat. No. EXTZ-732

Lot. No. (See product label)

Introduction

Description

Porcine Spleen Peptide Powder is a mixture of small-molecule peptides extracted and prepared from porcine spleen tissue, based on porcine spleen powder and processed through advanced technologies such as bioenzymatic hydrolysis and separation purification. Its core component is oligopeptides with a molecular weight mostly below 1000Da, while it also retains some active nutrients from porcine spleen. As a nutritional supplement raw material with higher bioactivity and functionality, it is widely used in fields such as health products and special medical purpose formula foods. The advantages of Porcine Spleen Peptide Powder focus on "efficient absorption" and "targeted action": The small-molecule peptide structure is more easily digested and absorbed by the human body, and can directly enter the blood circulation to quickly participate in physiological metabolism without going through complex decomposition processes. Moreover, these active peptides can act more precisely on physiological processes such as the body's immune regulation and digestive function improvement. Compared with ordinary nutrients, they have more clear functionality and higher action efficiency.
