Methyl Sulfonyl Methane powder

Cat. No. EXTZ-738

Lot. No. (See product label)

Introduction

Description	Methyl Sulfonyl Methane (MSM) is an organic sulfur compound. It is naturally present in the human body as well as in common foods and beverages such as milk, coffee, tea, and green vegetables. MSM is a white, odorless, crystalline substance that is highly soluble in water, ethanol, benzene, methanol, and acetone, and slightly soluble in ether. By providing a source of organic sulfur, MSM participates in the synthesis of collagen and connective tissues, thereby supporting joint health, reducing inflammation, and enhancing post-exercise recovery. MSM is well-tolerated by the human body with no obvious side effects at regular doses, which provides a reliable safety guarantee for its wide application in various fields.

Product Information

Form	White crystalline powder
CAS No.	67-71-0
Molecular Formula	C2H6O2S
Molecular Weight	94.13
