Broccoli seed extract—glucoraphanin

Cat. No. EXTZ-752

Lot. No. (See product label)

Introduction

Description	Broccoli seed extract is a natural plant-derived bioactive ingredient extracted from the seeds of Brassica oleracea var. italica (a cruciferous vegetable). Its core advantage lies in its high concentration of glucoraphanin, a stable precursor of sulforaphane. While glucoraphanin itself exhibits no direct biological activity, it requires conversion into sulforaphane via myrosinase to exert its functional effects.

Product Information

Form	Brownish-yellow powder
Purity	13%(HPLC)
