

Fulvic Acid

Cat. No. EXTZ-796

Lot. No. (See product label)

Introduction

Description

Fulvic Acid is the premium grade of humic substances, naturally mineralized from plant residues through long-term coalification and biochemical reactions. It features low molecular weight and is soluble in strong acidic solutions at $\text{pH} < 2$. With abundant active functional groups and a total acid group content of 9-10 meq/g, it delivers far higher biological activity than humic acid and humic acid. Our high-purity fulvic acid boasts stable physicochemical properties and excellent biocompatibility, serving as an ideal pharmaceutical raw material. It is the preferred choice for oral administration and injection applications, and widely applicable in pharmaceutical raw materials and formulation research.

Applications

As a pharmaceutical intermediate, it can be formulated into injections, suppositories, tablets, oral preparations, and topical preparations; it can also be used in cosmetics and as an additive in health foods.

Product Information

Purity

Powdered products: 99%; Liquid products: 5%
