

Cellulose Blend

Cat. No. EXTZ-817

Lot. No. (See product label)

Introduction

Description

Cellulose Blend is a state-of-the-art cellulase and hemicellulase complex, designed for the highly efficient and cost-effective conversion of pretreated lignocellulosic biomass to fermentable sugars. This advanced enzyme blend features proprietary activities including advanced AA9 lytic polysaccharide monooxygenases, improved beta-glucosidases and a comprehensive range of hemicellulase activities. It delivers significantly improved conversion rates with high thermal stability, providing greater operational flexibility in biomass processing for biofuel and bio-based chemical production.

Product Information

Source Microbial fermentation

Form Liquid

EC Number 3.2.1.4

Storage and Shipping Information

Storage Store at 0-10°C in sealed container in a dry place
