

Phosphatidylcholine from sunflower

Cat. No. EXTZ-805

Lot. No. (See product label)

Introduction

Description

Phosphatidylcholine from sunflower is a highly purified phospholipid product derived from non-GMO sunflower (*Helianthus annuus*) seeds, offering an excellent soy-free alternative for sensitive applications. As the most abundant phospholipid in cell membranes, phosphatidylcholine plays essential roles in cell membrane integrity, lipid metabolism, neurotransmitter synthesis and liver health. This product is widely used in dietary supplements, pharmaceutical formulations, parenteral nutrition and cosmetic applications, providing superior emulsification, bioavailability and membrane-repair functions without allergen concerns associated with soy-derived products.

Product Information

Species Helianthus annuus

Source Sunflower seed

Form Powder

Storage and Shipping Information

Storage Store in cool, dry place; protect from light and oxidation
